

6th April 2026

To whomever it may concern

Project Overview

We acknowledge that Profila AG, working on Project Catalyst Proposal #1200045 is to utilize the cross-chain integration that enables privacy-preserving Multi-Party Computation (MPC) as a Layer 2 service to the Profila app built on Cardano blockchain.

The implementation connects an Aiken smart contract on Cardano with a Partisia Blockchain MPC smart contract via a relay service. Users can initiate MPC computation requests on Cardano, have them processed through Partisia's MPC engine with encrypted secret inputs, and receive results back on-chain - all without exposing private data.

We acknowledge, to the best of our abilities that the following milestones have been met

- Milestone 1 - Aiken smart contract on Cardano preprod testnet with MPC initiation functionality, unit tests, documentation, and video demo.
- Milestone 2 - Partisia Blockchain MPC smart contract and relay service connecting Cardano to Partisia, with deployment evidence and video demo.
- Milestone 3 - Secret input submission to Partisia MPC contract with privacy-preserving computation, on-chain evidence, and video demo.
- Milestone 4 - End-to-end result flow from MPC computation back to Cardano with closeout report and final video demo.
